Mathematics Subject Classification 2000

Mathematics Subject Classification 2000 (MSC2000)

This is a reprint of MSC2000, which has been in use at MR starting with the January 2000 issue. MSC2000 was first printed in the Annual Index for 1999 together with a brief summary of the changes from the 1991 MSC. Conversion tables are available at the AMS website, www.ams.org.

How to use the Mathematics Subject Classification [MSC]

The main purpose of the classification of items in the mathematical literature using the Mathematics Subject Classification scheme is to help users find the items of present or potential interest to them as readily as possible—in products derived from the Mathematical Reviews Database (MRDB), in Zentralblatt MATH, or anywhere else where this classification scheme is used. An item in the mathematical literature should be classified so as to attract the attention of all those possibly interested in it. The item may be something which falls squarely within one clear area of the MSC, or it may involve several areas. Ideally, the MSC codes attached to an item should represent the subjects to which the item contains a contribution. The classification should serve both those closely concerned with specific subject areas, and those familiar enough with subjects to apply their results and methods elsewhere, inside or outside of mathematics. It will be extremely useful for both users and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them.

Every item in the MRDB receives precisely one *primary* classification, which is simply the MSC code that describes its principal contribution. When an item contains several principal contributions to different areas, the primary classification should cover the most important among them. A paper or book may be assigned one or several secondary classification numbers to cover any remaining principal contributions, ancillary results, motivation or origin of the matters discussed, intended or potential field of application, or other significant aspects worthy of notice.

The principal contribution is meant to be the one including the most important part of the work actually done in the item. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is (perhaps) at present only of interest to computer scientists, would have a primary classification in 05C (Graph Theory) with one or more secondary classifications in 68 (Computer Science); conversely, a paper whose overall content lies mainly in computer science should receive a primary classification in 68, even if it makes heavy use of graph theory and proves several new graph-theoretic results along the way.

There are two types of cross-references given at the end of many of the entries in the MSC. The first type is in braces: "{For A, see X}"; if this appears in section Y, it means that contributions described by A should usually be assigned the classification code X, not Y. The other type of cross-reference merely points out related classifications; it is in brackets: "[See also ...]", "[See mainly ...]", etc., and the classification codes listed in the brackets may, but need not, be included in the classification codes of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier must judge which classification is the most appropriate for the paper at hand.

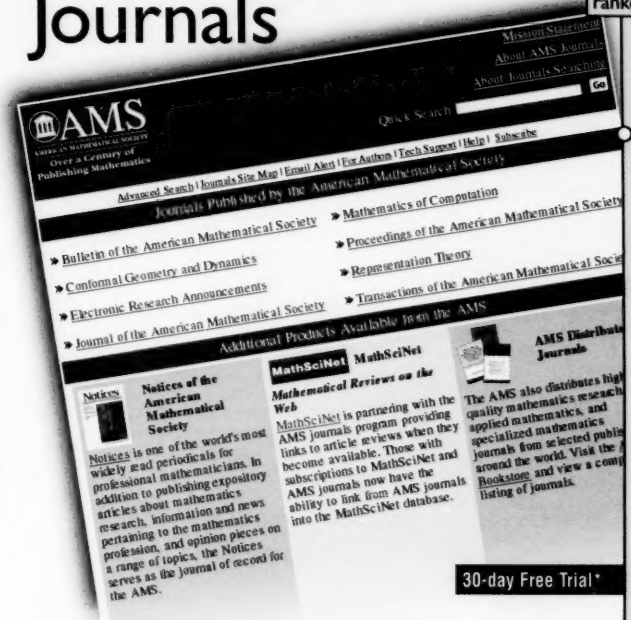
AMERICAN MATHEMATICAL SOCIETY

AMS Electronic Journals

2000 IMPACT FACTOR
Three AMS Journals ranked among top ten!



www.ams.org/journals

- Over 100 years of the highest quality in mathematical research
- Unique articles, book reviews, and reports
- Editors who are prominent in their fields
- Subscribe to the 2003 print versions of *Journal of Algebraic Geometry* (JAG), *Journal of the American Mathematical Society* (JAMS), *Mathematics of Computation* (MCOM), *Proceedings of the American Mathematical Society* (PROC), *Transactions of the American Mathematical Society* (TRAN) or *Moscow Mathematical Journal* (MMJ), and receive the electronic versions for FREE.
- Once you arrange access to one or more free electronic versions of AMS Journals, you will have access—at no additional charge—to two electronic-only journals of the AMS, *Conformal Geometry and Dynamics* (ECGD) and *Representation Theory* (ERT).
- Lower rate for the electronic version: Enjoy a lower subscription rate on JAMS, MCOM, PROC, TRAN, and JAG when you choose to receive only the electronic version.

Benefits of subscribing:

- There are over 7,300 AMS journal articles available online to date.
- Articles are now posted online upon acceptance and before appearing in a print issue.
- You can search, browse, view math symbols, and print articles specifically in your discipline.
- We offer free email notification of new articles.
- There is extensive linking between MathSciNet and AMS electronic journals.
- AMS electronic journals are also accessible through OCLC FirstSearch, EBSCO Online, SwetsNet, Information Quest, and the U.S. Department of Energy's PubSCIENCE.

AMS-distributed journals:

The AMS also distributes scientific journals from other publishers. Contact us for additional information or for a complete list of AMS-distributed journals, visit **www.ams.org/distribution**.

* **A 30-day free trial** is available to corporations and academic institutions. A downloadable Free Trial Form is available at: www.ams.org/customers/msntrial.pdf or www.ams.org/customers/ejournaltrial.pdf. For more information, contact AMS Membership and Customer Services, 201 Charles Street, Providence, RI 02904-2294, USA; phone 1-800-321-4267 or 1-401-455-4000 worldwide; fax 1-401-455-4046; email: cust-serv@ams.org.

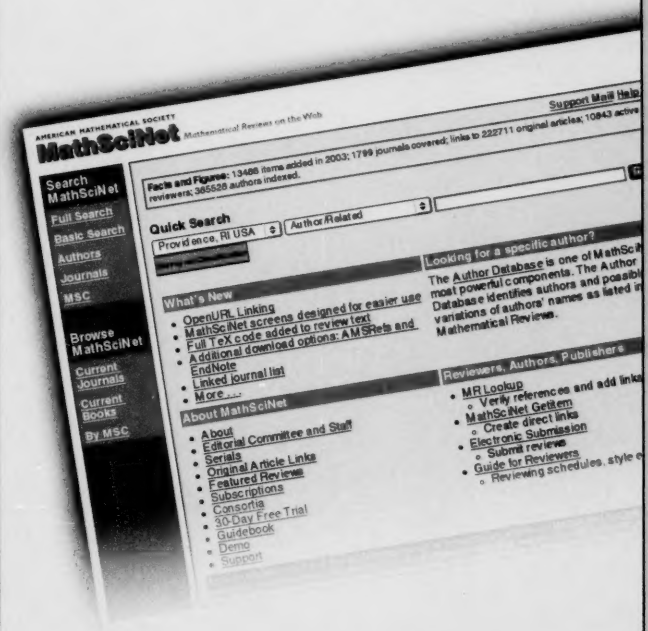
MathSciNet

The *Mathematical Reviews* Database on the Web—your premier source for searching the world's mathematical literature!



www.ams.org/mathscinet

MathSciNet is a unique database of a scholarly nature ... It has excellent coverage of current mathematics literature, providing signed reviews of mathematics articles, conference proceedings, and books of mathematical research. It is a database which is useful not only to mathematicians, but to science and engineering faculty also.

—Issues in Science & Technology Librarianship

MathSciNet offers:

- **Accurate bibliographic information**
- **Top-quality reviews of published mathematics items**
- **Links from reviews to over 210,000 original articles online**
- **30,000 linked reference lists**
- **Links to related MR Database entries**
- **Extensive search capabilities**
- **Journal information**
- **Clipboard**
- **Three browsing tools**
- **OpenURL article links**
- **Database expansion items**
- **And much more!**

For further details about MathSciNet, go to **www.ams.org/mathscinet.**

AMERICAN MATHEMATICAL SOCIETY

The AMS Books and Journal Donation Program matches donors with academic institutions in countries that have a crucial need for research-level publications to support their mathematics programs. Potential donors are invited to contact the AMS with information about books and primary research journals that they are willing to donate to those libraries. (Please note that textbooks and the *Notices* or *Bulletin* are not candidates for this program.)

Suitable publications are used to fill existing inquiries, or are listed on our website as an invitation for libraries to request the items. Under this program donations are shipped not to the AMS but directly to the receiving institutions, and the Society reimburses donors for shipping costs.
